

SHOT BLASTERS / THERMAL OVENS

You can rely on Steelabrator when it comes to Airless Shot Blasters and Thermal Cleaning Ovens.

202

Compact design occupies minimal floor space.

250

Optional parts baskets available for all your parts cleaning needs.

S0-II

Thermal Cleaning Oven eliminates need for chemical cleaning and reduces waste disposal.

When it comes to providing the highest quality in shop cleaning equipment, ATEC Trans-Tool's Steelabrator Cleaning Systems offer a variety of Airless Shot Blasters and Thermal Ovens to fit your specific needs.

Each blaster has been designed to provide the quickest and most economical way to clean your parts. Just load the blaster with your degreased parts and let the machine do all the work! Rust and carbon deposits are stripped away within minutes, renewing its original finish.

In addition to Shot Blasters, Steelabrator offers a line of Thermal Ovens designed to eliminate water solvent cleaning and the use of

costly hot tank chemicals. Each oven safely cleans parts using a convection heat process. By raising the oven temperature evenly, parts warping is less likely to occur. Parts come out of the oven dry and are ready for shot blasting.

Whether your capacity requirements are large or small, Steelabrator has the solution to all your cleaning needs.
